## Publishing Policies

Researchers can participate in the conference by preparing a research paper within one of the conference themes, while adhering to the following conditions:

- Download the publication request form, paper template, and intellectual property pledge form from the congress website.
- It must be according to the template designated on the congress website, and the number of pages must not be less than 6 and not more than 10 pages.
- It must be in one of the two languages: Arabic or English.
- All entries will be subject to plagiarism and AI checks.
- Preparing a visual presentation of the research work to be presented at the conference in a period not exceeding 15 minutes.
- Accepted papers will be published in a special issue in the peer-reviewed Technical Research Journal issued by the Misrata College of Industrial Technology.

Invitation to Participate in The Exhibition

The Organizing committee invites all companies specialized in medical devices and equipment and technologies related to the conference's themes to apply to participate in the exhibition that will be held on the sidelines of the conference. The Organizing committee also invites creators and inventors in the fields of the conference's themes to participate in the exhibition. Brief Summary

The development of digital transformation technologies, the information revolution, artificial intelligence, and the development of modern medical equipment in all areas of the health sector have brought about change in all aspects of life. Which requires members of this sector and those concerned to keep pace with these developments and strive to develop the Libyan health sector, both financially and humanly, to ensure improved services and living conditions for the citizen. In this regard, and in implementation of the tasks assigned to the Misrata College of Industrial Technology and the Libyan Society for e-Health and Telemedicine; They are organizing this scientific conference that brings together experts and specialists with manufacturers, suppliers and companies working in this field, as well as presenting the latest technologies and peer-reviewed scientific research within the activities of the conference and the dedicated exhibition that will be held within the corridors and halls of the College of Industrial Technology. The conference also includes a number of invited lectures and workshops.

Objectives

- Enhancing awareness and understanding of the latest developments in the field of e-health and telemedicine, and how to benefit from modern technologies to improve health care.
- Exchanging knowledge and experiences between researchers and practitioners in the field of health and technology, to enhance future cooperation and partnerships.
- Review the challenges and opportunities facing new technologies in health, and analyze how to use them effectively to improve health care and communication between doctors and patients.
- Highlighting the latest research and innovations in areas such as remote disease diagnosis, remote treatment and digital health data management.
- Promote dialogue and exchange of ideas about privacy and security issues in online health data exchange and how to protect patients' personal data.
- Strengthen communication between participants from different actors in the field of health and technology in order to build a society capable of improving and developing the health sector

Conference Themes

- E-health and its role in development of the health sector.
